

Hi Javier,

My suggestions for additions to tomorrow's agenda:

- * Documentation - Europa needs developer and user documentation. I think the Wiki is the perfect place for this so it can be built incrementally.
- * Resource model - the current implementation of the extended resource types is not completed. It is important to get the word out on this and to discuss if we need to complete it.
- * ANML - I think implementing this language will make the system much easier to use and domain modeling less error prone.

Best,

Peter.
